

Eisinger Polishing Compounds

Finishing compounds are divided into cut down compounds, intermediate compounds and final rouges.

Cut Down compounds contain abrasives that will remove scratches and smooth surfaces in preparation for the next stage of finishing. These are used on brushes and treated buffs.

Intermediates are less aggressive than cut down compounds, and if used after cut down, will produce a better final finish in the rouging stage. These are used on treated or regular buffs and brushes. Graystar is an excellent compound used with felt wheels to create flat surfaces with little residue left on the metal.

Rouges are used to impart a high lustre. They are used on soft brushes and buffs which are stitched or unstitched for the final polish. Our Dialux is a premium rouge from France. Our Water Soluable washes easily in water for quick clean up.

Polishing Compounds									
Compound	Order#	Weight Per Bar	Yellow Gold	White Gold	Silver	Brass	Stainless Steel	Application	
Cut Down									
 Bobbing Tripoli	42-734	1 1/4lbs (563g)	x	x	x	x	x	Most aggressive, greasy

Red Rouge	42-728WS	1lb (450g)	x		x	x		All purpose	
Tripoli	42-734WS	1 1/4lbs (563g)	x	x	x	x	x	Aggressive cut down	
Yellow Glo	42-762	1/4lb (225g)	x	x	x	x		All purpose	

Eisinger Platinum Polishing Compounds

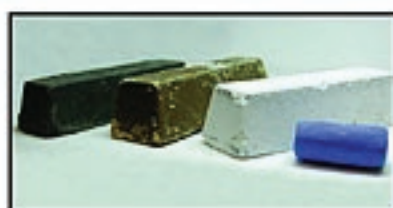

Four steps to a beautiful platinum finish.

42-763 - Platinum Graystar

42-764 - Platinum Tripoli

42-765 - Platinum Rouge

42-767 - Platinum Blue Final Polish

Premium Platinum Finishing Compounds

These premium compounds are manufactured in five grits ranging from #800 to #8000. Made in Japan.

Grit #	Order #
800	42-751
1500	42-752
4000	42-753
6000	42-754
8000	42-755
